Work experience

01/2022— today	Sr. Backend Engineer (Aricalot Technology) Designing and developing scalable SaaS products to support applications across desktop, tablet, and mobile platforms. Setting up and building backend systems from the ground up, while maintaining high development standards through code reviews and best practices to ensure performance, reliability, and clean design. Collaborating with frontend engineers to translate business requirements into efficient backend logic and data flows. Designing and implementing secure and well-documented RESTful APIs to power dynamic user experiences. Using tools like SonarQube and performance profilers to analyze code quality, identify optimization opportunities, address security vulnerabilities, and guide refactoring efforts. Currently serving as the senior backend developer, responsible for guiding technical decisions, mentoring junior developers, and creating documentation and training materials to support the onboarding and growth of new team members.
12/2020 — 1/2022	Backend Engineer (Origami Technology) Worked as a Backend Java Developer, contributing to the development of RESTful APIs and backend systems using Java. Collaborated with cross-functional teams, wrote clean code.
1/2019 — 12/2020	Network Operations Engineer (Huawei- NTC) Monitored and maintained critical network infrastructure to ensure high availability and performance. Handled real-time incident response, troubleshooting, and escalation, while generating regular reports and supporting network upgrades. Gained strong experience with Huawei tools, telecom protocols, and ensuring SLA compliance in a high-pressure environment. Performed root cause analysis and escalated complex issues to appropriate teams when necessary.

Projects

- Solution 50**
 - A appointment booking, bio metrics capture service based on United States of America which is used to make FBI Background check, Fingerprint services etc.
 - Worked from scratch on creating 10 finger print card using C++ and also implemented JNI to call native code.
 - Integrated fingerprint capture hardware to web application by creating agent system application using java.
 - Hands on experience with creating updater agents and system applications.
- Pacesetter**
 - A taxation system currently used by thousands of users in United State of America.
 - This system is already in production and is processing taxation of year 2023.
 - Created in house logging solution for easier log processing
 - Added queue based data processing for tax documents.
 - Tuned JVM garbage collection for better performance.
- Acruit**
 - Developed a nurse shift placement and management portal with dual portals targeting Australia and New Zealand.
 - Implemented shift scheduling, assignment, and management functionalities for healthcare professionals.
 - Integrated Xero for financial management, ensuring seamless invoicing and payroll processing.
 - Integrated Zendesk for customer support, enhancing user experience with efficient query resolution.
 - Ensured compliance with industry standards and regional regulations in healthcare staffing.
 - Led backend development ensuring a scalable and robust backend.
- Legal Candace**
 - A legal case management system based on United States of America which is used to manage court cases, showing up coming cases, case logs, task managements, scheduling appointments etc.
 - This system is still in development phase and being ready for production phase.
 - Integrated elastic search for global search across application and documents.
 - Migrated micro-service code to a monolithic backend.
 - Migrated SQL base to NoSql application.
- Speak Tu**
 - An Employee report generation system (DEI) designed for United States of America which generates dynamic reports of an employee based on various factors such as gender, ethnicity, salary etc.
 - The main purpose of this project is to provide insights and predictability into workplace equity using, pay equity analysis revealing pay discrepancies, and diversity metrics that can then be used to tackle actions, and create EEO-1 report required by state governments of US.
 - This system is in production since September 2022.
- Nepal Warrior Championship**
 - A portal to watch online streaming videos of MMA held by NWC Nepal.
 - Vimeo Video player integrated for online streaming videos.
 - IME Pay wallet and Stripe payment (International) integrated.
 - Nwcmma.com** is in production.
- ERP Software**
 - A cloud based software to manage and integrate the important parts of the business such as supporting automation and processes in finance, human resources, manufacturing, supply chain, services, procurement, and more.
 - Developed from scratch and still in development phase.

Education

2014 — 2018

Nepal Engineering College, Pokhara University

2011 — 2013

Trinity International College

2011

Lyceum Model School
